Thank you for purchasing the Little Giant® As Seen On TV ladder. When used correctly, the Little Giant As Seen On TV is the strongest, safest, most versatile ladder in the world. Little Giant Ladder Systems subjects each ladder to comprehensive tests for safety in design and construction, so you can trust it in all the work you do.

Please do not ignore the instructions! Make the most of your ladder system by learning how to use it safely. If you have any questions about how to operate your ladder system, please contact us. We value our customers, and we’re happy to help.

**GETTING TO KNOW YOUR LADDER**

The Little Giant As Seen On TV is a Multi-Use ladder system made up of three major components: one inner ladder assembly and two outer ladder assemblies that telescope over the inner section. The inner and outer assemblies work together with the hinge locks and Lock Tabs to adjust the ladder into different lengths and positions, including:

1. Extension
2. A-Frame stepladder
3. Trestle-and-plank scaffolding system
4. 90-degree (only used against a secure wall)
5. Staircase

Little Giant Ladder Systems
1198 N. Spring Creek Place • Springville, UT 84663
1. Do not force the hinges in or out using any tools. You may cause permanent damage to the hinge mechanism.
2. If there is pressure on the hinge lock pins, they may not open properly. Relieve the pressure by moving one half of the ladder back and forth until the hinge locks move with minimal force.
3. Make sure each Lock Tab is fully engaged into the appropriate rung tube before climbing on the ladder. Failure to do so may result in injury.
4. For your safety, set up your ladder so the rungs are always level from front to back and from side to side.
5. Keep clothing and body parts out of all moving mechanisms, including the Hinge Locks and Lock Tabs to avoid pinching.
6. Keep clothing and body parts away from rungs when telescoping the outer ladder over the inner ladder.
7. Use caution when using the ladder around electricity. Ensure that the ladder does not come in contact with electrical circuits or currents.
8. The Little Giant As Seen On TV has a maximum working load of 300 LBS.
9. Do not stand above the third rung from top.
10. Little Giant Ladder Systems assumes no liability for damage or injury that may result from failing to follow all instructions correctly.
11. Keep all ladder rungs, ladder feet, work platforms, and other standing and gripping surfaces clean and free from foreign materials.
12. Do not lean too far over the side of the ladder and keep both feet on the rungs at all times; as a rule of thumb, keep your navel between the rails.
13. Inspect feet for wear; replace them when necessary.
14. Read all labels on the ladder before use.

A-Frame and Staircase Ladder Safety Tips
1. Ensure that the Hinge Locks and Lock Tabs are securely engaged before climbing your ladder.
2. Make each of your ladder’s four feet are solidly planted before climbing.
3. When using your ladder on a stair case, ensure that the rungs are level and that each foot is on a solid, secure surface.

Extension Ladder Safety Tips
1. Do not allow the full weight of the ladder to fall on the hinges as the ladder folds from the extension to the A-frame position.
2. When releasing the Lock Tabs, make sure you support the inner ladder assembly with one hand to prevent it from sliding down rapidly. Failure to do so may result in injury.
3. Use the proper angle for the extension ladder position. The distance from the base of the ladder to the bottom of the support wall should be one-fourth the working height of the extension ladder (minimum distance between ladder and support wall must be 3 feet).
4. Fully engage the Hinge Locks before use, failure to do so may result in injury.
5. When using your As Seen On TV ladder as a tall extension ladder, stake the feet to the ground and tie down the top for extra security. Extend the ladder at least 3 feet above a supporting roof or eve.

Scaffolding Safety Tips
1. Do not use outer or inner sections of the ladder as a separate scaffold ladder.
2. When the scaffolding plank is above the third rung (three feet high), it may be used as a work bench, but not as a standing platform.
Palm Buttons
(Hinge Locks)

Push the Palm Buttons in to release the hinge locks.

The Palm Buttons allow the ladder to change from storage, A-frame to extension.

Lock Tabs
Change your ladder's height.

The Lock Tabs adjust the height of ladder. Pull out the Lock Tabs to unlock, replace the Lock Tabs in the desired rung tube. Unlock only one Lock Tab at a time while supporting the inner ladder assembly with one hand. Do not unlock the Lock Tab if anyone is on the ladder.

Extension

Starting from the small A-frame position; open and lock your ladder to the extension position and lay the ladder face up on ground. Unlock the Lock Tabs and extend the top outer section first; the top outer section must be fully extended before the lower outer section is extended. (If your ladder has wheels, the wheels must be placed so they are at the top of the extension.) Once you have extended the outer sections to the desired height, lock the Lock Tabs. Always double check the two hinge locks and four Lock Tabs to make sure they are fully locked and engaged.

Next, flip the ladder over to a face-down position. Place the feet of the ladder against a solid wall to keep the ladder from moving. Lift the other end of the ladder, and walk the ladder hand over hand one rung at a time until you are able to lean the ladder against the wall.

Lift the base of the ladder and carefully move the base away from the wall until the ladder leans at a 75.5 degree angle. The distance from the ladder's base to the base of the support wall must be 1/4 the working length of the ladder; i.e., 1 foot out from the wall for every 4 feet in ladder height. Ladder must be extended approximately 3 feet above a roof line or working surface.

To take the ladder down from the extension position, lift the base of the ladder and carefully move it to the wall to brace the feet of the ladder. Slowly walk the ladder down hand over hand one rung at a time until you are able to lay the ladder on the ground. Flip the ladder over so it faces up. Unlock the Lock Tabs and telescope each outer section to the rung nearest to the hinges, then lock the Lock Tabs. Push in the Palm Buttons and return to the small A-frame position.
Begin from the small A-frame position. Stand to one side of the ladder; unlock both Lock Tabs on one outer section. When extending the ladder your hands must always be on the outside of the outer section. Place one hand on the palm button and push away from you on the inner section to extend the height. Once you have reached the desired height; line up the inner ladder and the outer ladder rungs, place your hand under the rungs then lock both Lock Tabs.

Next, unlock the Lock Tabs on the opposite outer section. Place one hand on the palm button and push up on the inner section to extend the height. Once you have reached the desired height; line up the inner ladder and the outer ladder rungs, place your hand under the rungs then lock both Lock Tabs.

From the tall A-frame position reduce the height on one side of the ladder by one rung. Make sure the ladder is on a flat level surface and the short side of the ladder is against a secure wall.

Start from the small A-frame position; lengthen the down side of the ladder to the desired height. Ensure the ladder rungs are level before using.

### Scaffolding

1. Remove the outer sections from the inner ladder assembly.
2. Open the inner ladder assembly to the A-frame position until both hinges lock. This is the first of two trestles needed for the scaffolding function.
3. Grasp both outer ladder bases.
4. Turn one side so it faces exactly the same as the second unit. Insert Lock Tabs of that base into the adjacent holes of the opposite outer base.
5. Grasp the outer ladder base with the unused Lock Tabs and lower 1/2 inch, then spread the opposite outer ladder base to form a second A-frame trestle (YES and NO). 
6. Rotate forked ears on work platform to position.
7. Insert Work Platform between outer ladder bases on the third rung down of each base. The wire-formed end of the Work Platform should surround the outer rung turned to the inside of the outer ladder A-frame trestle.
8. Press down on top of Work Platform until it locks in a horizontal position. Outer ladder A-frame trestle is now ready for use as second trestle.
9. Space the two trestles and place an appropriate scaffolding plank on the set of rungs at the desired working height.

*Work Platform and Plank sold separately.
